

Controlling priority invasive non-native riparian plants and restoring native biodiversity (CIRB)

This project is part financed by the European Union's INTERREG IVA programme.

Opportunity to tender for the control of invasive non-native riparian plants at various locations in Ayrshire during 2013.

Tender Document (12).

Control of Japanese Knotweed: The Pow Burn Catchment.

Control Method: Foliar application of herbicide (Roundup Pro Biactive 450g/l) using Knapsack sprayers. Stem injection to be used between the riparian margins and the flood line. All in accordance with the Code of Practice for Using Plant Protection Products in Scotland.

This tender document is supported by **Document 1 'Guidance for contractors,'** and must be read in conjunction with said document.

Questions relating to any part of this document should be raised at the **Pre Tender briefing on 6th March 2013 at 2pm** at ART's offices or directed to ART's project management staff by email info@ayrshirerivertrust.org

Questions and answers submitted prior to the briefing will be documented and raised at the meeting. Questions and answers arising subsequent to the meeting will be circulated to all contractors expressing an interest in the tendering process. No questions will be answered on a 'one to one' basis (e.g. face to face or by telephone) except during the public pre tender meeting on the **6th March 2013** at ART's offices. This is to ensure transparent and fair competition.

1. Location of target control areas

Included are both banks of the Pow Burn and its tributaries downstream to the estuary but **excluding** both banks of the burn where it flows through Old Prestwick Golf Course from the Railway Bridge Grid Ref (NS 234990, 626550) downstream to the bridge at Grid Ref (NS 234510, 627650). **Guidance will be provided by ART at the time of commencement.**

The areas of control will include riparian margins, extending to riverbank, bank tops, riparian woodland, footpaths and agricultural land where applicable, all as detailed on the attached maps in section 4.

NB. Should permission be required to access Prestwick Airport - Before permission to access to Prestwick Airport property is granted, a short induction is required which takes approximately 30 minutes at a prearranged time. Personnel are required to sign in and out of airport property before and after work. Contractors should be willing to undertake the induction and follow the airports working rules if pricing this tender. The induction can be arranged at the start of the working day to allow contractors to commence work immediately after the training. In total, working time on Airport property constitutes approximately 1 man day.

The area of control will include riparian margins, extending to riverbank, bank tops, riparian woodland, footpaths and agricultural land where applicable. Stem injection should be used between the riparian margins and the flood line. The attached maps detail the upper and lower limits of control on each watercourse and any other outlying areas. (**See Section 4 of this document**).

2. Timing of works to be undertaken

ART estimate that **6 man days** should be allocated to the control of Japanese Knotweed on the Pow Burn catchment during 2013. Control should be completed during July 2013 for stem injection and September 2013 for spraying. Weather may limit available days for spraying therefore contractors should allocate adequate staff resources to allow them to undertake this control during suitable weather. Control should be completed by the end of the month wherever possible.

3. Tender Procedures.

In accordance with INTERREG IVA procurement requirements, ART will accept tender submissions from suitably qualified contractors. Contractors are requested to supply quotations for the chemical control of INNS in the riparian zones of the control areas using Roundup Pro Biactive in accordance with the manufacturers' guidelines and the Code of Practice for using Plant Protection Products in Scotland (CPPPS). An understanding of invasive non native species and their control is essential and contractors should demonstrate their knowledge at the time of tender submissions by whatever method they see fit.

Collusion between contractors is not permissible and would exclude them from this and any future opportunity to tender for this project.

Only tenders that satisfy the pre-selection criteria will progress to scoring all as detailed in supporting document 1. '*Guidance for Contractors*'.

Contractors may complete as many or few tender documents as they wish and a separate proposal must be submitted for each individual tender that the contractor wishes to apply for. The successful candidate for each tender will be determined using the pre-determined scoring criteria detailed in supporting document 1. '*Guidance for Contractors*'.

For ease of interpretation, tenders should be submitted in the following format with each section clearly identified and all required supporting evidence included:

1. Introduction
2. Pre-selection criteria
3. Understanding of the requirements
4. Specification
5. Proposed methodology
6. Aftercare provision
7. Cost, expressed as a day rate per person inclusive of VAT (where applicable)

All tenders submitted will be retained by ART in accordance with INTERREG IVA requirements.

4. Maps of Target Control Areas on the Pow Burn Catchment

4.1 Map of the Pow Burn Catchment with target notes
